Geological Photo Documentation

Pan-and-tilt camera system with real-time syncing and auto-indexing

- Touch screen with one-button operation
- Chainage automatically integrated within the picture
- Intuitive user interface
- Pictures stored at memory stick or transferred directly to planning office through WLAN.
- Prepared for integration with navigated machinery
The camera is mounted on a pan-and-tilt unit pre-programmed to cover the areas of interest.

A series of pictures are taken in different angles when the operator pushes the start button on the control screen.

The high-resolution camera shows details in the geology pattern. The lighting is from the headlights of the vehicle the camera is mounted on.
