

Geological Photo Documentation

Automatic panning camera system with autoindexing and real-time synchronisation with Bever Team Online cloud services

Documentation options are numerous when high-quality pictures are collected. Here, a 3D view with MWD-logged bolts, and camera pictures projected onto profiler scan (requires navigated camera system).

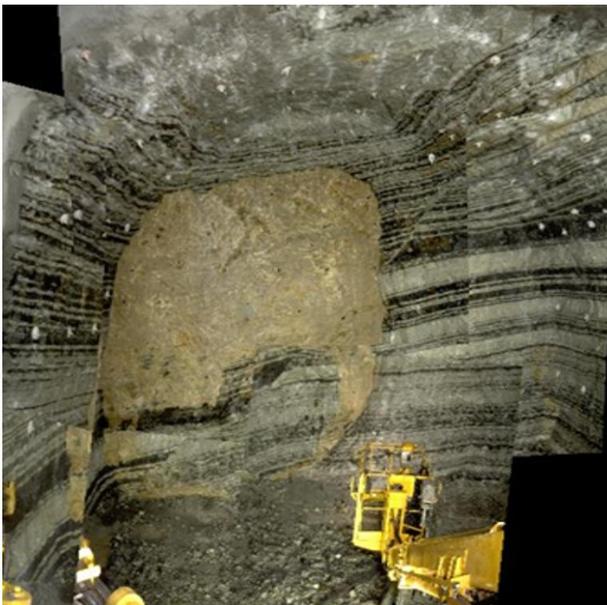

The high-resolution camera shows details in the geology pattern. The lighting is from the headlights of the vehicle the camera is mounted on.

- Touch screen with one-button operation
- Chainage integrated within the picture

- Intuitive user interface
- Pictures stored at memory stick or transferred to planning office through WLAN.
- Prepared for integration with navigated machinery

Bever Control Story

Norwegian contractors introduced the concept of computer controlled drilling as early as 1979 when the first AMV computer controlled jumbo was set in operation. Bever Control is the pioneer company for this technology world wide. We have delivered our system hundreds of drill rigs and have set the standard for the performance of computer controlled drill rig systems.
